# # AIM Django Demo Project Report Baohua Cao

SECTION I: SETUP DEV AND DATABASE, DEMO SQL SECTION II: DEV CODING AND BUILD WEB / ADMIN FINAL OUTPUT:

http://ec2-54-186-83-10.us-west-2.compute.amazonaws.com:8000/http://ec2-54-186-83-10.us-west-2.compute.amazonaws.com:8000/admin/

Username: admin Password: smiletolife

#### SECTION I: SETUP DEV AND DATABASE, DEMO SQL

- 1. Create an AWS EC2 instance.
- 2. Install software packages and updates.
- Setup virtualenv with python3 source myenv/bin/activate
- 4. Git clone:

git clone https://github.com/michaelb87/aim-recruiting-django.git

5. Install requirements.txt

pip install -r requirements.txt

Fixed software bundles installation issues.

6. Make migrations

(myenv) [root@ip-172-31-31-17 aim-recruiting-django]# python manage.py makemigrations Migrations for 'demo\_app':

demo\_app/migrations/0001\_initial.py

- Create model Publisher
- Create model Source
- Create model RevenueRecord

(myenv) [root@ip-172-31-31-17 aim-recruiting-django]# python manage.py migrate Operations to perform:

Apply all migrations: admin, auth, contenttypes, demo\_app, sessions

Running migrations:

Applying contenttypes.0001\_initial... OK

Applying auth.0001 initial... OK

Applying admin.0001\_initial... OK

Applying admin.0002\_logentry\_remove\_auto\_add... OK

Applying admin.0003\_logentry\_add\_action\_flag\_choices... OK

Applying contenttypes.0002\_remove\_content\_type\_name... OK

Applying auth.0002\_alter\_permission\_name\_max\_length... OK

Applying auth.0003\_alter\_user\_email\_max\_length... OK

Applying auth.0004\_alter\_user\_username\_opts... OK

```
Applying auth.0005_alter_user_last_login_null... OK
  Applying auth.0006_require_contenttypes_0002... OK
  Applying auth.0007_alter_validators_add_error_messages... OK
  Applying auth.0008_alter_user_username_max_length... OK
  Applying auth.0009 alter user last name max length... OK
  Applying auth.0010_alter_group_name_max_length... OK
  Applying auth.0011_update_proxy_permissions... OK
  Applying demo_app.0001_initial... OK
  Applying sessions.0001 initial... OK
  1) Write a custom django admin command to ingest demo data eg. `python manage.py ingest
demo data.csv`
(myenv) [ec2-user@ip-172-31-31-17 aim-recruiting-django]$vim

#### Setting up development environment issues and fixes:

```
.....
  File
"/Library/Frameworks/Python.framework/Versions/3.7/lib/python3.7/importlib/__init__.py",
line 127, in import_module
    return _bootstrap._gcd_import(name[level:], package, level)
  File
"/Library/Frameworks/Python.framework/Versions/3.7/lib/python3.7/site-packages/django/db/
backends/mysql/base.py", line 36, in <module>
    raise ImproperlyConfigured('mysqlclient 1.3.13 or newer is required; you have %s.' %
Database. version )
django.core.exceptions.ImproperlyConfigured: mysqlclient 1.3.13 or newer is required; you have
0.9.3.
Update the mysglclient version to fix this and update the init .py under the project:
import pymysql
pymysql.install_as_MySQLdb()
Commented out the version check from the base.py file:
Fixed:
Vim python3.7/site-packages/django/db/backends/mysql/base.py
34 version = Database.version info
 35 #if version < (1, 3, 13):
 36 #
               raise ImproperlyConfigured('mysqlclient 1.3.13 or newer is required; you
have %s.' % Database.__version__)
 37
File
"/Library/Frameworks/Python.framework/Versions/3.7/lib/python3.7/site-packages/django/db/
backends/mysql/operations.py", line 146, in last_executed_query
    query = query.decode(errors='replace')
AttributeError: 'str' object has no attribute 'decode'
Fixed:
140
         def last_executed_query(self, cursor, sql, params):
141
              # With MySQLdb, cursor objects have an (undocumented) "_executed"
142
              # attribute where the exact query sent to the database is saved.
143
              # See MySQLdb/cursors.py in the source distribution.
144
              query = getattr(cursor, '_executed', None)
```

if query is not None:

query = query.encode(errors='replace')

# decode modified to encode

147 return query

Reset mysql root password by using mysql safe mode to access the mysql database.

#### **SECTION II: DEV CODING AND BUILD WEB / ADMIN**

#### 1. Create Admin

(myenv) [ec2-user@ip-172-31-31-17 aim-recruiting-django]\$ python manage.py createsuperuser

Username (leave blank to use 'ec2-user'): admin

Email address: caobaohua@gmail.com

Password:

Password (again):

Superuser created successfully.

## 2. Enable AWS EC2 Security Group for Remote Access

Open 8000 for TCP in ec2 instance's security group

Custom TCP Rule TCP 8000 0.0.0.0/0

# 3. Run Django Server:

(myenv) [ec2-user@ip-172-31-31-17 aim-recruiting-django]  $\$  python manage.py runserver 0.0.0.0:8000

Watching for file changes with StatReloader

Performing system checks...

System check identified no issues (0 silenced).

November 27, 2019 - 01:38:05

Django version 2.2.7, using settings 'demo.settings'

Starting development server at http://0.0.0.0:8000/

Quit the server with CONTROL-C.

[27/Nov/2019 01:38:08] "GET / HTTP/1.1" 200 126

[27/Nov/2019 01:41:48] "GET / HTTP/1.1" 200 167

#### 4. Remotely Access Main Home-Page from Browsers:

http://ec2-54-186-83-10.us-west-2.compute.amazonaws.com:8000/

Or

http://54.186.83.10:8000/

## 5. Remotely Access Admin System from Browsers:

http://ec2-54-186-83-10.us-west-2.compute.amazonaws.com:8000/admin/

http://54.186.83.10:8000/admin/

User: admin

Password: smiletolife

## 6. Collect Static Files of JS, HTML, CSS, IMAGES

(myenv) [ec2-user@ip-172-31-31-17 aim-recruiting-django]\$ python manage.py collectstatic

You have requested to collect static files at the destination location as specified in your settings:

/home/ec2-user/aim-recruiting-django/static

This will overwrite existing files!

Are you sure you want to do this?

Type 'yes' to continue, or 'no' to cancel: yes

## 7. Restart Django Server

(myenv) [ec2-user@ip-172-31-31-17 aim-recruiting-django]\$ python manage.py runserver 0.0.0.0:8000

Watching for file changes with StatReloader

Performing system checks...

System check identified no issues (0 silenced).

November 27, 2019 - 11:27:14

Django version 2.2.7, using settings 'demo.settings'

Starting development server at http://0.0.0.0:8000/

Quit the server with CONTROL-C.

#### 8. Add Routings

```
Update urls.py to add routings as follows:
```

```
urlpatterns = [

path(", vie
```

path(", views.IndexView.as\_view(), name='index'),

path('date\_view/<str:date>/', views.date\_view, name='date\_view'),

path('publisher\_view/<int:publisher>/<str:date>/',views.publisher\_view,

name='publisher\_view'),

## 9. Add Views

1

Update views.py to add new data processing logic as follows:

from django.shortcuts import render

from django.views import View

from .models import Publisher, Source, RevenueRecord

from django.db.models import Sum

from .tables import \*

```
from django_tables2 import RequestConfig
#from django.http import HttpResponse
class IndexView(View):
    def get(self, request):
        table = RevenueRecordTable(RevenueRecord.objects.values('date')\
                  .annotate(Sum('revenue')).annotate(Sum('clicks')))
        RequestConfig(request).configure(table)
        return render(request, 'index template.html', {'table': table})
def date view(request, date):
    DateRevenueObjects = RevenueRecord.objects.filter(date=date).values('publisher')\
             .annotate(Sum('revenue')).annotate(Sum('clicks'))
    for obj in DateRevenueObjects:
        obj['date'] = date
        obj['name'] = Publisher.objects.get(pk=obj['publisher']).name
        #return HttpResponse(str(obj))
    table = DateRevenueTable(DateRevenueObjects)
    RequestConfig(request).configure(table)
    return render(request, 'date_template.html', {'table': table})
def publisher view(request, publisher, date):
    PublisherRevenueObjects
                                                                                                =
RevenueRecord.objects.filter(date=date,publisher=publisher).values('source')\
             .annotate(Sum('revenue')).annotate(Sum('clicks'))
    for obj in PublisherRevenueObjects:
        obj['source name'] = Source.objects.get(pk=obj['source']).name
    table = PublisherRevenueTable(PublisherRevenueObjects)
    return render(request, 'publisher template.html', {'table': table})
                         HttpResponse('<html><head></head><body>publisher:
    #return
                                                                                             %s,
date: %s</body></html>' % (publisher, date))
10. Add Django tables2
Add django tables2 to use the new djang's tables2 template for table rendering, ordering and
pagination as follows:
# add your table herei
import django_tables2 as tables
from .models import RevenueRecord
import datetime
class RevenueRecordTable(tables.Table):
    class Meta:
```

```
model = RevenueRecord
        #template name = "django tables2/bootstrap.html"
        fields = ("date", "revenue__sum", "clicks__sum")
    #date = tables.LinkColumn('date_view', args=[tables.A('date')])
    date = tables.Column(linkify=('date_view',{'date':tables.A('date')}))
    revenue sum = tables.Column()
    def render revenue sum(self, value):
        return '{:0.2f}'.format(value)
class DateRevenueTable(tables.Table):
    revenue sum = tables.Column()
    class Meta:
        model = RevenueRecord
        fields = ("name", "revenue__sum", "clicks__sum")
    name = tables.Column(linkify=('publisher_view', {'publisher': tables.A('publisher'), 'date':
tables.A('date')}))
    def render_revenue__sum(self, value):
        return '{:0.2f}'.format(value)
class PublisherRevenueTable(tables.Table):
    class Meta:
        model = RevenueRecord
        fields = ("source_name", "revenue__sum", "clicks__sum")
    revenue__sum = tables.Column()
    def render_revenue__sum(self, value):
        return '{:0.2f}'.format(value)
11. Add Templates
Add html templates to render the front-end html pages and tables as follows:
{% load render_table from django_tables2 %}
<!doctype html>
<html>
    <head>
        <title>Demo Page</title>
    </head>
```

```
<body>
        {% render table table %}
    </body>
</html>
{% load render_table from django_tables2 %}
<!doctype html>
<html>
    <head>
        <title>Daily Revenue Page</title>
    </head>
    <body>
        {% render_table table %}
    </body>
</html>
{% load render_table from django_tables2 %}
<!doctype html>
<html>
    <head>
        <title>Publisher Daily Revenue Page</title>
    </head>
    <body>
        {% render_table table %}
    </body>
</html>
12. Collect Static Files and Run Django Server to update the web system
(myenv) [ec2-user@ip-172-31-31-17 aim-recruiting-django]$ python manage.py collectstatic
(myenv) [ec2-user@ip-172-31-31-17 aim-recruiting-django]$ python manage.py runserver
0.0.0.0:8000
Watching for file changes with StatReloader
Performing system checks...
System check identified no issues (0 silenced).
November 27, 2019 - 13:19:34
Django version 2.2.7, using settings 'demo.settings'
Starting development server at http://0.0.0.0:8000/
Quit the server with CONTROL-C.
13. Open browsers and test
http://ec2-54-186-83-10.us-west-2.compute.amazonaws.com:8000/
```

http://ec2-54-186-83-10.us-west-2.compute.amazonaws.com:8000/admin/

# http://54.186.83.10:8000/

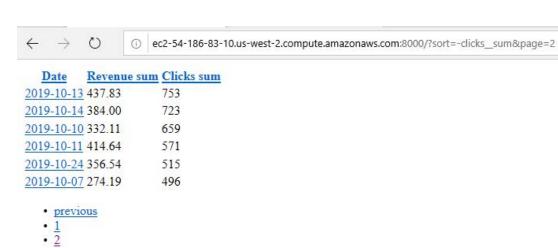

# http://54.186.83.10:8000/admin/login/?next=/admin/

# Screen shots:

- 2) On the main page show a table with the following columns:
  - date
  - sum(revenue)
  - sum(clicks)
